Lab 2 – Responsive Navbar and Grid Drill

Folder: lab-2/ | Date: 29 October 2026

Approach

Framework: Bootstrap 5.3.3 (bundled locally in `vendor/`, no CDN needed) for the navbar component and collapse behaviour.

Layout: The navbar row uses Flexbox: logo and cart each get `flex: 1 1 0` so the links sit exactly centered. Below 768px, Bootstrap's `navbar-expand-md` collapses the links into a hamburger menu and the cart stays visible beside it. The product grid uses CSS Grid with `grid-template-columns` changed by media queries.

Breakpoints

Viewport	Navbar	Product grid
Phone: below 768px	Hamburger menu	1 column
Tablet: 768 to 1023px	Full links	2 columns
Desktop: 1024px and up	Full links	4 columns

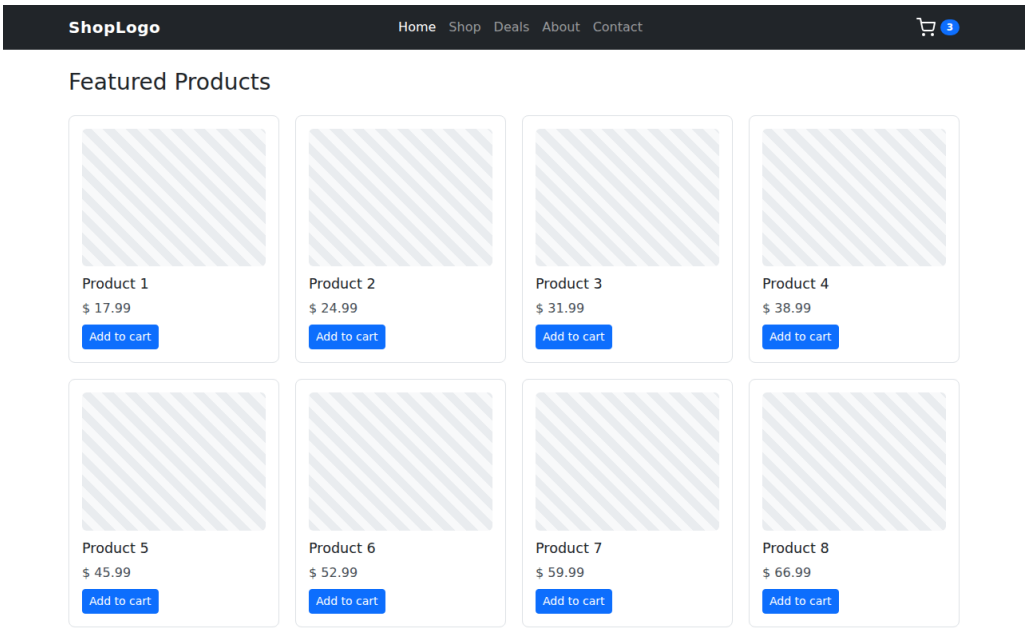

Measured results (browser computed styles)

Width	Grid columns	Hamburger visible
Phone 375px	1	Yes
Tablet 768px	2	No
Desktop 1280px	4	No
Edge 767px	1	Yes
Edge 1023px	2	No

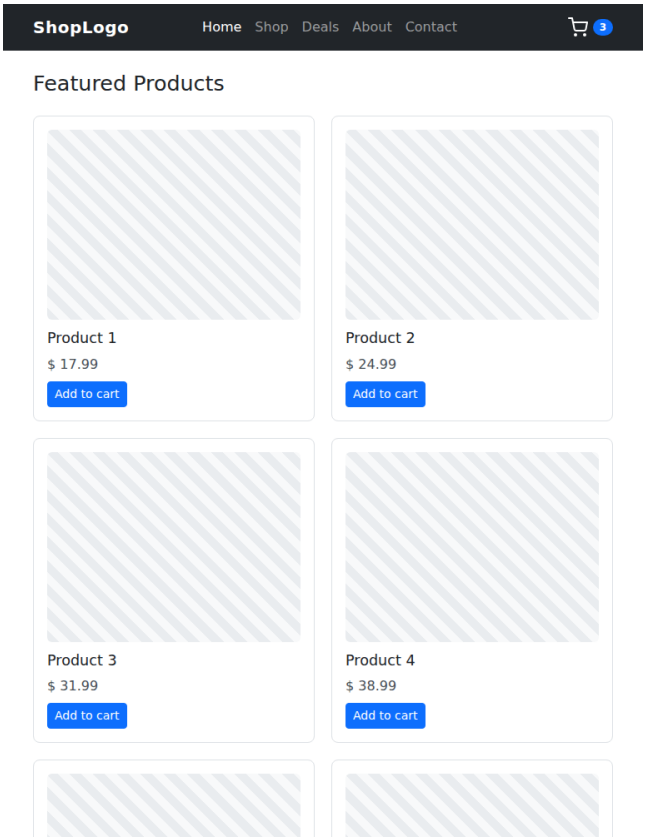

Deliverables

`index.html` (validates with 0 errors, Nu Html Checker), `css/style.css`, `vendor/bootstrap.min.css`, `vendor/bootstrap.bundle.min.js`, and this PDF.

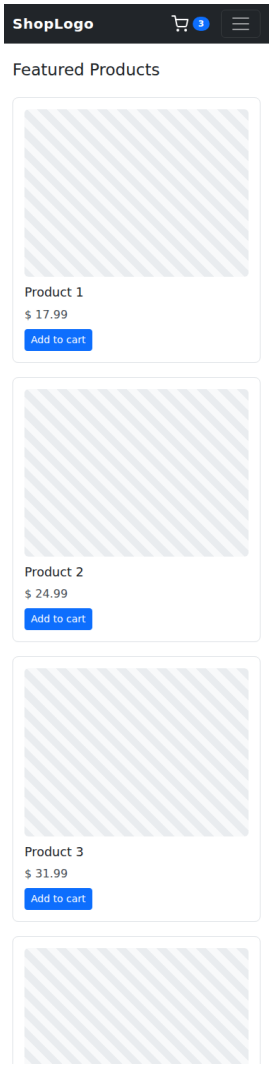

Desktop – 1280px (4 columns, links centered)

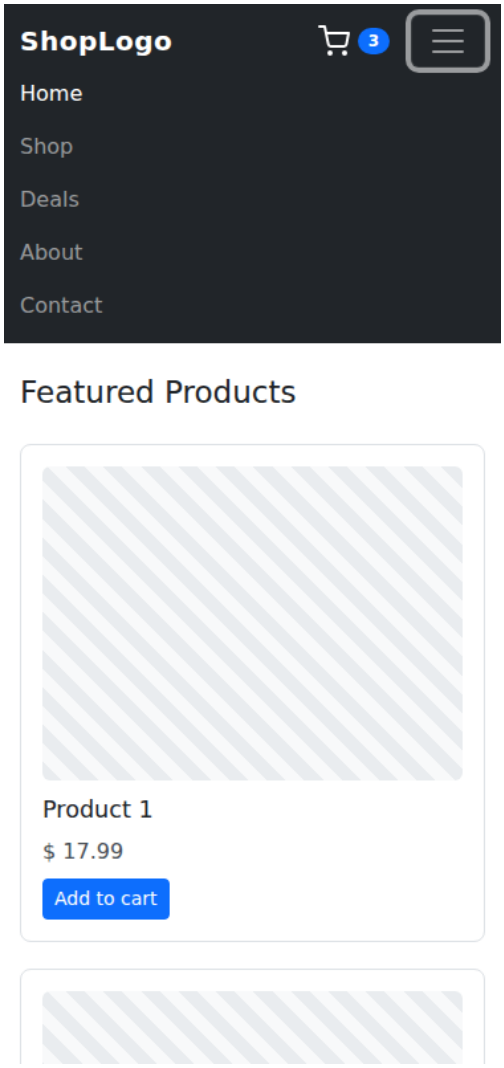

Tablet – 768px (2 columns, full navbar)

Phone – 375px (1 column, hamburger)

Menu closed (cart and hamburger visible)

Menu open after tapping hamburger
